AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0075] beginning at line 3 on page 23 of the substitute specification with the following rewritten paragraph.

[0075]   As described above, although the patient server 1 stores the vital data for each of the IDs, the patient server 1 does not store the patient data corresponding to each of the IDs. Accordingly, if the patient ~~serer 1~~ server 1 were accessed without authorization, it would ~~not~~ be impossible to identify each of the vital data of a particular patient.
